Note regarding product dimensions: (see also Guideline and Example)
Dimensions have to be measured in functional condition. Non-electrical equipment (tubes, jets, ...) and cords (removable and non-removable) may not be considered. Foldable or extendable parts (e.g. antennas) have to be considered in its most compact condition.

The perspective to measure the product always has to be a view on the front of the product. E.g. for a TV on the panel, for an oven or microwave on the front door, for a radio on the display / the buttons. In case it is not totally clear which side is the front (e.g. water kettle, hair dryer) it has to be documented with pictures which side has which dimensions.

Height, Width and length/depth are defined as follows:

Height: bottom to top

Width: left to right

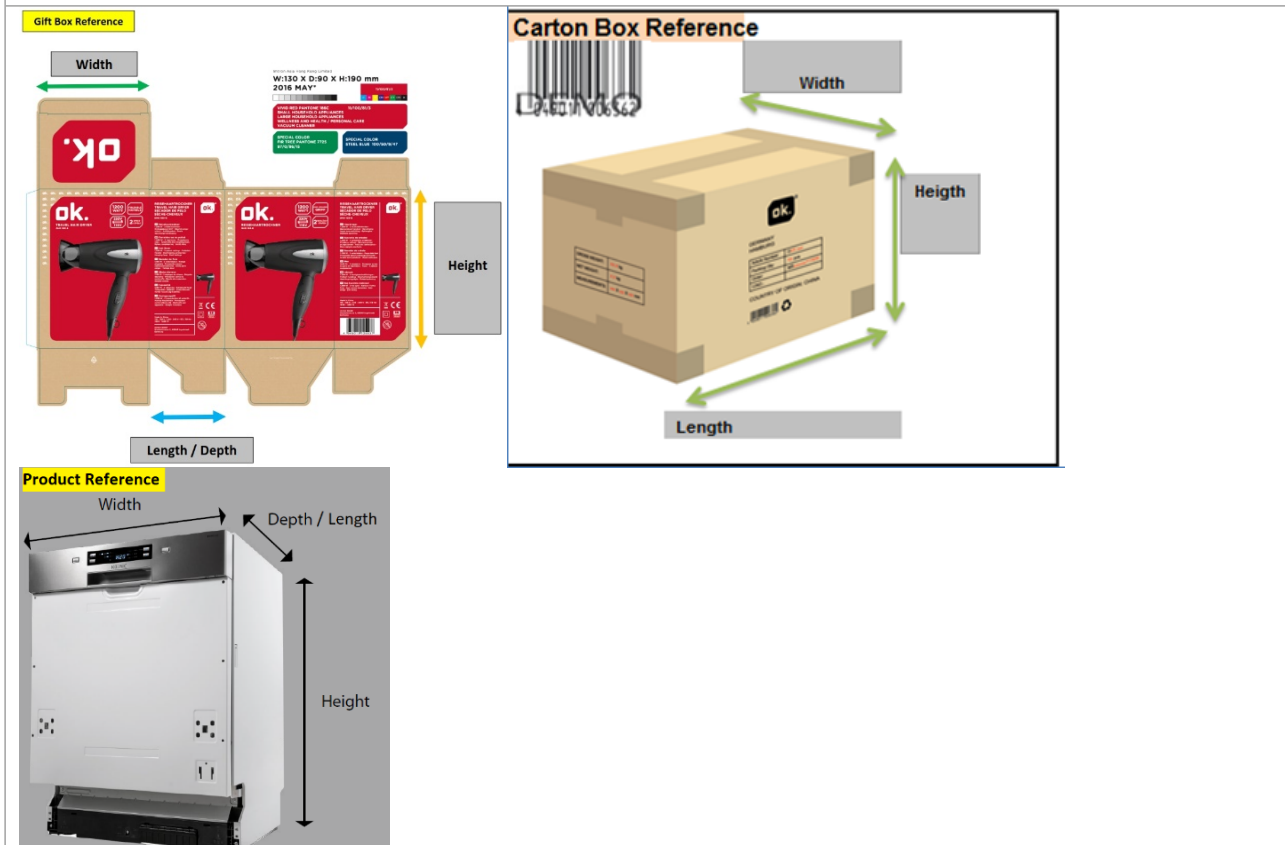

Length/Depth: front to back

The dimensions have to be measured at its largest expansion (e.g. including handle of microwave).

The dimensions of the export carton and the giftbox have to be measured according to the pictures on the report.
In case the product is not cubiform (e.g. water heater) the dimensions have to be measured at its largest expansion.
The size of the screen has to be measured according to the visible area.

Note regarding product weight:

"Net weight product in gramm", is the weight of the unit in functional condition, which means delivered in basic configuration.
Not included are packaging, documents, additional equipment which consists small electric devices, for example cases, bags.
Batteries are not included if they can be removed in a non-destructive way.
