Section 13-Disposal condition

The battery may be regulated by national or local regulation. Please follow the instructions of proper regulation. As electric capacity is left in a discarded battery and it meets other metals, it could lead to distortion, leakage, overheating, or explosion, so make sure to cover the (+) and (-) terminals with friction tape or some other insulator before disposal.

Section 14-Transportation Information (Air, Sea, Land)

1. Battery must be of a design type proven to meet testing requirements as per Manual of test and criteria, Part Ⅲ, subsection 38.3.

2. Battery, according to Section IB of PACKING INSTRUCTION 968 of the 2022 IATA Dangerous Goods Regulations 63rd Edition, may be transported/applicable to U.S D.O.T regulations for the safe transport of Lithium Battery.

3. Battery to be protected to prevent short circuit. This includes protection against contact with conductive materials within the same packaging that could lead to short circuit.

4. Cells and batteries, offered for transport, must be packed in inner packaging that completely enclose the cell or battery; To provide protection form damage or compression of the batteries, the inner packaging must be placed in a strong rigid outer packaging.

5. The packaging shall be adequate to avoid mechanical damage during transport, handling, and stacking & Stock on shelves. The material and pack design shall be chosen to prevent the development of unintentional electrical conduction, corrosion of the terminals and ingress of moisture.

6. The package must be handled with care as a flammability hazard exists if the package is damaged.

7. Regarding transport, the following regulations are cited and considered

-The International Civil Aviation Organization (ICAO)Technical Instructions.

-The International Air Transport Association (IATA) Dangerous Goods Regulations.
