Services and updates will be available as long as your TomTom device is fully operational. Fully operational means that the device is able to receive software updates, service updates, content and works with current accessories. A device will not be fully operational when one of these can no longer be received by the device or is no longer available. As our map and navigation software technologies evolve they may require newer hardware technology to support this. In case the hardware is no longer compatible, updates will not be possible. TomTom services are available through your smartphone via Bluetooth® wireless technology. Extra costs from your data service provider may apply. Check compatibility on: tomtom.com/connect.
